Hanseboot 2017: Eberspaecher presents smart boat heating control

- **Flexible heating control via smartwatch and smartphone**
- **Hydronic S3 Economy: Water heating for optimum thermal comfort**
- **Airtronic: Economical air heaters for boats**

Esslingen, 13 September 2017 – **Pleasant temperatures on the high seas, even if it is cold outside – enabled by heating systems from Eberspaecher. At the hanseboot in Hamburg, heating and cooling specialist Eberspaecher will be exhibiting tailor-made heating systems from 28 October to 5 November 2017, sharing a stand with J. A. Schlueter Soehne. A particular highlight is the location-independent heating control, which is now even more mobile with the extension for the smartwatch.**

Conveniently via an app, boaters can control the heating system with their smartphone, smartwatch or any other internet-enabled device. This makes a spontaneous boat trip possible in any weather situation without any loss of comfort: Simply activate the heater with the **EasyStart Web** via smartphone or directly with a click using smartwatch before getting on board. Water sports enthusiasts will be able to enjoy a warm cabin – whether it is before the start of the weekend or after an extended shore excursion.

Optimal thermal comfort for boats

If the weather outside is cold and uncomfortable, boat owners can look forward to returning to a pre-heated cabin after shore excursions. The powerful **Hydronic S3 Economy** water heater with infinitely variable heating control offers compact dimensions and flexible installation options for easy retrofitting. It not only heats the air evenly, but

also makes it possible, in combination with a boiler, to heat service water – for example, for a hot shower.

If the power consumption on board is limited, the air heating series **Airtronic** is ideally suited: it can be quickly and easily installed in a variety of boat models. Thanks to their particularly economical fuel and power consumption, long operating times are possible.
