### **Caravan Salon 2024: Travel comfortably in any weather**

- **Compact and modular E-Airtronic air heater**
- **Breezonic Performance with user-friendly controls**
- **Tried-and-tested product families of air and water heaters**

*Esslingen / Duesseldorf (Germany), 27 June, 2024*—**Traveling in a recreational vehicle or caravan offers vacationers unparalleled independence and flexibility. Being close to nature in any weather without sacrificing comfort—this is made possible by Eberspaecher solutions. At the Caravan Salon in Duesseldorf, Germany, the thermal management expert will be showcasing products for electric and conventional drives. Visitors will find the E-Airtronic EHV1 230V/ 110V and more at the Booth B11 in Hall 13. With its design-protected modularity, the electric air heater increases design freedom in thermal management.**

With the **E-Airtronic EHV1**, Eberspaecher is applying the successful Airtronic series to e-mobility. The 230 V and 110 V versions of the electric air heater with 1 kW heating performance, specially developed for battery-powered electric vehicles, provide targeted heat where wanted during the winter months. The PTC technology used makes reliable heater operation possible. The device's protected modular design ensures a wide range of product variations and flexible application options. It also offers a choice of different outlets and air systems. Furthermore, it allows the additional integration of a coolant heating component, for example, to keep the interior of hybrid vehicles at the right temperature while driving. The removable filter makes maintenance easier. The heater's compact design measuring 207 mm in length and 139 mm in height further simplifies installation. The E-Airtronic also impresses with particularly quiet operation for a restful night's sleep—thanks, among others, to the stepless and brushless blower. The device is

also ideal for use in caravans and motorhomes with conventional or hybrid drives—via an onshore power supply or an energy management system. The low weight of just 1.45 kg has a positive effect on the camper's or caravan's maximum permissible weight.

### **Efficient air-conditioning system with user-friendly control options**

For the summer and transitional seasons, Eberspaecher presents the **Breezonic Performance**. The rooftop air-conditioning system with heat pump heats or cools as required by reversing the cycle. Its particularly quiet operation and the additional night mode guarantee relaxing peace and quiet. The system also impresses with its compact dimensions, low weight, and high performance efficiency. The refrigerant R32 used for operation is far more environmentally friendly than the common R410A. The product family features two versions in the power classes 2.5 and 3.6 kW for individual comfort requirements. The Breezonic offers a wide range of operating options. The touch panel integrated in the air distributor allows control directly on the appliance. In addition, the roof system can be controlled with the corresponding app via Bluetooth or with an optional infrared remote control. The optionally available **EasyStart Touch**, which is permanently installed on the wall and has an internal temperature sensor, offers intuitive and uncomplicated operation via the touchscreen. The glass front ensures an elegant design and easy cleaning. In addition to recreational vehicles, the Breezonic is also suitable for caravans.

### **Air and water heaters for all power classes**

Eberspaecher will also be exhibiting its proven product families of air and water heaters on site. The third generation of **Airtronic** features quickly available heat with optimized power consumption in all output classes from 2 to 8 kW. The **Hydronic** offers a particularly high heating output of up to 12 kW in larger RVs. **EasyStart Pro**, as an intelligent permanently mounted operating element, and the Internet-based **EasyStart Web** control system ensure straightforward operation via app or browser.

**Captions:**

- *The E-Airtronic EHV1 230V/ 110V generates targeted heat in electric, hybrid and conventional recreational vehicles and campers.*
- *From app to remote control: The Breezonic Performance excels thanks to numerous operating options and high performance efficiency.*
- *The Airtronic 3 air heater from Eberspaecher quickly ensures comfortable temperatures in RVs.*

**About Eberspaecher:**

*With approximately 10,700 employees at 80 locations worldwide, the Eberspaecher Group is one of the automotive industry's leading system developers and suppliers. The family business, headquartered in Esslingen am Neckar, stands for innovative solutions in exhaust technology, automotive electronics and thermal management for a broad range of vehicle types. In combustion or hybrid engines and in e-mobility, the components and systems from Eberspaecher ensure greater comfort, higher safety and a clean environment. Eberspaecher is paving the way for future technologies such as mobile and stationary fuel cell applications, synthetic fuels as well as the use of hydrogen as an energy carrier. In 2022, the Group generated revenue of around 6.4 billion euros. Net revenue adjusted for transitory items amounted to 2.7 billion euros.*
